EXPERIENCE

Microsoft | Software Engineering Intern

Summer 2026 · 3 months

- Built an **AI-assisted internal tool** that lets product managers configure and launch Office promotions themselves, removing engineering from the launch process.
- Extended the Adaptive Cards renderer to support more complex card schemas, letting product managers launch richer promotions without engineering changes.
- Won **3rd place worldwide in the Accessibility track** of the Microsoft Intern Global Hackathon with Access360.

EDUCATION

Technological University Dublin

August 2023 – May 2027

BSc Computer Science (Infrastructure)

PROJECTS

Stockball | Rust, Python, FastAPI, Next.js, PostgreSQL, Redis

- Built and deployed a live virtual stock market for Premier League players, where prices move only through trades.
- Wrote the **Rust trading engine**, with price-impact curves, idempotent orders and automatic freezes during matches.
- Built **Python data pipelines** over fixtures, stats, market values, injury news, social sentiment and betting markets.
- The signals drive **six synthetic-trader strategies** whose orders go through the same engine as real users, never setting prices directly.

Game Engine RS | Rust, wgpu, WGSL, winit

- Built a lightweight Rust game engine on **wgpu** with **instanced rendering**, custom WGSL shaders, model loading and text rendering.
- Designed **reusable APIs** for the game loop, cameras, entity transforms, resource loading, input and gestures.

Access360 | React Native, TypeScript, Express, PostgreSQL

- Built an indoor navigation app for Microsoft multi-floor buildings, with building and floor search, route tracking and facility reporting.
- Implemented an AI-assistant that plans routes around each user's accessibility needs.

TECHNICAL SKILLS

Languages: Rust, Python, TypeScript, JavaScript, SQL, Java, C

Frameworks: Axum, Tokio, Next.js, React, React Native, Express, Spring Boot

Developer Tools: Docker, PostgreSQL, Redis, Git, Caddy, Nginx, Azure
